ASU CHEF BOT

Project Team 2

Developers and Contributors:

Jay Al-Hussain

JJ Torres

Shanel Kuchera

Team 2 has collaborated to create an Image classification model using Deep Learning Neural Networks to classify images and use a chef bot to recommend a recipe with an image or text input.

Future Scope

PROJECT SCOPE

Phase 1

Finding the appropriate
Data sets

Phase 2

Determining the right
model and architecture

Phase 3

Build, Develop, and Test
model for improvements

Phase 4

Launch Chef Bot,
Debugged, and Enjoyed!

Executive Summary

1

Executive Summary

A creative approach was taken to develop a recipe recommendation bot that would increase grocery sales by providing recipes, ingredients, and approximate cost of a recommended meal.

Fintech and Financial Programming

- Scientific approach to data gathering and preparation
- Machine Learning Architecture and development
- User Interface and Bot development
- Deployment, Testing, and Debugging
- Beta Launch Application

Approach: Phase 1

Data Collection, Clean up, and Exploration

Data sets: Kaggle, Web Scraping, BlueCart API, Kroger API

- Text Datasets For the word cloud
- Data Sets with images of Ingredients from Kaggle
- Food101 , Fruits & Vegetables
- Made use of several API's (Spoonacular , Telegram)
- Bluecart and Kroger for later developments
- Web Scraping with BeautifulSoup
- Exploration of images and organized data

Clean up included conversion, division, and sizing using built in Keras Preprocessing methods

Notes:

**High Capacity
GPU needed
model training,**

**NER Word
Cloud with data**

Phase 2

Team Approach

Approach: Applied CNN architecture using a Keras sequential model and a Keras API with 5 layers and deployed using Telegram API

- Convolutional Neural Networks are widely used for the task of image classification because of their inherent ability to reduce the dimensions of the input image data.
- While they are less computationally intensive as other Algorithms like SVM's for classification they still require some reasonable resources like GPU's.
- Telegram an open source messaging app was chosen as the interactive medium to showcase the results of the model built.

Challenges and Success:

Epoch time frame, Bot Bugs , Accuracy

Functionality, Live Deployment

Deep Learning Layers

Model: "sequential_1"		
Layer (type)	Output Shape	Param #
=====		
conv2d_2 (Conv2D)	(None, 98, 98, 2)	56
max_pooling2d_2 (MaxPooling2D)	(None, 49, 49, 2)	0
conv2d_3 (Conv2D)	(None, 47, 47, 4)	76
max_pooling2d_3 (MaxPooling2D)	(None, 23, 23, 4)	0
flatten_1 (Flatten)	(None, 2116)	0
dense_2 (Dense)	(None, 3000)	6351000
dense_3 (Dense)	(None, 1500)	4501500
dense_4 (Dense)	(None, 500)	750500
dense_5 (Dense)	(None, 148)	74148
=====		

Model 148 Architecture
148 Classes with Mixed Food's

Model: "sequential_1"		
Layer (type)	Output Shape	Param #
=====		
conv2d_2 (Conv2D)	(None, 198, 198, 32)	896
max_pooling2d_2 (MaxPooling2D)	(None, 99, 99, 32)	0
dropout_2 (Dropout)	(None, 99, 99, 32)	0
conv2d_3 (Conv2D)	(None, 97, 97, 64)	18496
max_pooling2d_3 (MaxPooling2D)	(None, 48, 48, 64)	0
dropout_3 (Dropout)	(None, 48, 48, 64)	0
flatten_1 (Flatten)	(None, 147456)	0
dense_4 (Dense)	(None, 3000)	442371000
dense_5 (Dense)	(None, 1500)	4501500
dropout_4 (Dropout)	(None, 1500)	0
dense_6 (Dense)	(None, 500)	750500
dense_7 (Dense)	(None, 36)	18036
=====		

Model 36 Architecture

Model Metrics

Accuracy of the models

Metric Measurements

Accuracy of Training and Validation Datasets

Accuracy for model 148 and model 36

Overall Model Performance : Fair and can be improved

Strength Points

Easy to retrain with new datasets

Keras API is very easy to work with

Weakness

Computationally intensive on normal hardware

Model Metrics

Confusion Matrix 36 Classes

Phase 3: Bot Launch

ASU CHEF Bot

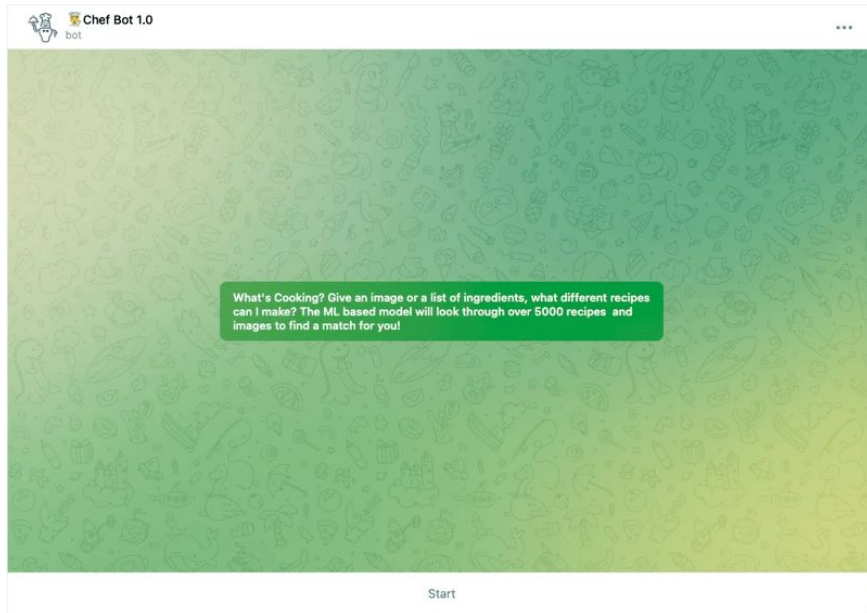

Healthy Appetite Quencher
